				330	270		60			

#### **4.4. Information about the involved teachers**

This information can be found in the appendix.

#### **4.5. List of teaching labs and workplaces**

Not applicable.

#### **4.6. Optimal number of students**

The optimal number of students in the single major MA program of linguistics is thirty (30) students per year of studies.

#### **4.7. Estimation of costs per student and year**

The detailed evaluation of costs can be found in the appendix.

The estimation of the ideal number of students as sixty (60) over both years leads to approximated costs of 4400,- HRK (ca. 600 Euro) per student and year.

#### **4.8. Quality control**

Along the lines of already applied procedures, the program will cooperate with students, offer individual advising and anonymous evaluations, as well as questionnaire studies with the goal to maximize the students' satisfaction and quality of courses. This includes also the evaluation of the availability of teachers and their advising role.

The overall evaluation of the program includes the tracking of students in their academic and professional career, after finishing the program. Employers will be involved in the evaluation of the acquired knowledge and skills, as much as this is possible. The organization and content of the program will be compared to similar programs. On a regular basis, the participating students and teachers will be involved in exchange with

colleagues from other Universities and similar programs.

The application of quality control at the University of Zadar will be fully supported and guaranteed.
